

Get your cabinet checked to ensure it is working properly.

Preventative Maintenance

Dirty cabinet? Clean it up!

It's time to start thinking about getting your cabinets checked and making sure they are in the best shape for the upcoming months.

Here is a checklist of things we look for while in your cabinet:

- Cabinet ventilation system
- Replacing the air filter if needed
- Flasher operation
- Circuit breakers
- Cabinet power supply
- Age of the controller & parts
- Controller/MMU Interconnection
- Controller Real Time Clock Accuracy
- Vehicle & Pedestrian detector operations
- Verify proper signal
- Controller startup
- Pedestrian pushbuttons
- Check signal heads for mounting, visors, backplates
- Confirm detectors & loop functionality

Having your cabinet checked regularly ensures you are providing a safe intersection to the public and making sure your equipment is running as efficiently and precise as possible.
