

### Clary Lithium Battery Pack

The Clary *SP-1400LT* UPS System is a turnkey, true on-line, solid state, microprocessor controlled Uninterruptible Power System (UPS) designed for Traffic/ITS applications. The system is configurable and programmable via an operator control panel or an attachable PC or remotely via web-browsers. The power system is double-conversion, converting the incoming AC power to DC and then back to AC, where 100% of the power to the load is generated by the on-board true sine-wave inverter. The UPS is capable of operating, up to its rated power level in extreme environments with existing equipment on the street today. The SP1400LT provides full operation in LED signalized intersections when configured with optional Lithium Ion Phosphate or VRLA batteries.
